

# SPYWOLF

## Security Audit Report

Completed on  
**June 15, 2022**

MADE IN USA 

 @SPYWOLFNETWORK

 @SPYWOLFNETWORK

 SPYWOLF.CO

# OVERVIEW

This audit has been prepared for **RemeDao** to review the main aspects of the project to help investors make an informative decision during their research process.

You will find a summarized review of the following key points:

- ✓ Contract's source code
- ✓ Owners' wallets
- ✓ Tokenomics
- ✓ Team transparency and goals
- ✓ Website's age, code, security and UX
- ✓ Whitepaper and roadmap
- ✓ Social media & online presence

“

*The results of this audit are purely based on the team's evaluation and does not guarantee nor reflect the projects outcome and goal*

- SPYWOLF Team -

”

# TABLE OF CONTENTS

---

Project Description	01
Contract Information	02
Current Stats	03-04
Featured Wallets	05
Vulnerability Check	06
Threat Levels	07

Social Media & Online Presence	13
About SPYWOLF	14
Disclaimer	15

# RemeDao

## PROJECT DESCRIPTION

### **According to their whitepaper:**

The RemeDAO will be rebase token system which will pay holders compounded rewards Everyday. In the DAO, users can propose and vote for their favorite meme tokens. The most vote token will be bought and distributed automatically by the RemeDAO system right after the voting end.

**Release Date:** June 12, 2022

**Category:** Rebase/DAO

# CONTRACT INFO

Token Name  
Remedao

Symbol  
RMD

Contract Address

0x577d0b05FaFA1b320EB30808E34a3e199C1bdA92

Network

Binance Smart Chain

Language

Solidity

Deployment Date

July 14, 2022

Verified?

Yes

Total Supply

1,500,000

Status

Not launched

## TAXES

Buy Tax  
**10%**

Sell Tax  
**10%**

\*Taxes can be changed in future

## Our Contract Review Process

The contract review process pays special attention to the following:

- ✓ Testing the smart contracts against both common and uncommon vulnerabilities
- ✓ Assessing the codebase to ensure compliance with current best practices and industry standards.
- ✓ Ensuring contract logic meets the specifications and intentions of the client.
- ✓ Cross referencing contract structure and implementation against similar smart contracts produced by industry leaders.
- ✓ Thorough line-by-line manual review of the entire codebase by industry experts.

### Blockchain security tools used:

- OpenZeppelin
- Mythril
- Solidity Compiler
- Hardhat

# CURRENT STATS

(As of June 13, 2022)

Liquidity

Not added yet

Burn

No burnt tokens

Status:  
Not Launched

MaxTxAmount  
10% of holder's  
balance

Additional Info  
Rebase token with  
changing supply

LP Address(es)

Liquidity not added yet

## TOKEN TRANSFERS STATS

Transfer Count	1
Uniq Senders	1
Uniq Receivers	1
Total Amount	1500000 RMD
Median Transfer Amount	1500000 RMD
Average Transfer Amount	1500000 RMD
First transfer date	2022-06-12
Last transfer date	2022-06-12
Days token transferred	1

## SMART CONTRACT STATS

Calls Count	2
External calls	2
Internal calls	0
Transactions count	2
Uniq Callers	1
Days contract called	1
Last transaction time	2022-06-12 18:17:32 UTC
Created	2022-06-12 18:15:20 UTC
Create TX	0x1e266280bc6b9e0388bf6451dbb3af5ffbc7d4785a76b0975f34e3103c2c445e
Creator	0x7777074a1f955631cbeda52f2900d6cc3ce29999

# FEATURED WALLETS

Owner address	0x7777074a1f955631cbeda52f2900d6cc3ce29999
Treasury receiver	0x0000a9fdb9d4f7949d5b8060e4e93c7107729999
Insurance fund receiver	0x4444d2a65d1f75f56f8b9d3f4d3fe55631bd6666
Vote contract	0x4934df96683cbd46f1ab88b53e2dcc6d893442c
LP address	Liquidity not added yet

## TOP 3 UNLOCKED WALLETS

1

Same as treasury receiver

# VULNERABILITY CHECK

Design Logic	Passed
Compiler warnings.	Passed
Private user data leaks	Passed
Timestamp dependence	Passed
Integer overflow and underflow	Passed
Race conditions and reentrancy. Cross-function race conditions	Passed
Possible delays in data delivery	Passed
Oracle calls	Passed
Front running	Passed
DoS with Revert	Passed
DoS with block gas limit	Passed
Methods execution permissions	Passed
Economy model	Passed
Impact of the exchange rate on the logic	Passed
Malicious Event log	Passed
Scoping and declarations	Passed
Uninitialized storage pointers	Passed
Arithmetic accuracy	Passed
Cross-function race conditions	Passed
Safe Zeppelin module	Passed
Fallback function security	Passed

# THREAT LEVELS

When performing smart contract audits, our specialists look for known vulnerabilities as well as logical and access control issues within the code. The exploitation of these issues by malicious actors may cause serious financial damage to projects that failed to get an audit in time. We categorize these vulnerabilities by the following levels:

## High Risk

---

Issues on this level are critical to the smart contract's performance/functionality and should be fixed before moving to a live environment.

## Medium Risk

---

Issues on this level are critical to the smart contract's performance/functionality and should be fixed before moving to a live environment.

## Low Risk

---

Issues on this level are minor details and warning that can remain unfixed.

## Informational

---

Information level is to offer suggestions for improvement of efficacy or security for features with a risk free factor.

# FOUND THREATS

## ⚠ High Risk

Owner can change max sell transaction limit per epoch, based on percentage of holder's balance.  
If set to 0 it will be impossible to sell.

```
uint256 public maxSell = 10;
uint256 public constant maxSellDenominator = 1000;
function setMaxSell(uint256 _maxSell) external onlyOwner {
    require(maxSell <= 1000);
    maxSell = _maxSell;
}
function _transferFrom(address sender, address recipient, uint256 amount) internal returns (bool) {
    .....
    if (recipient == address(pair) && !_isFeeExempt[sender]) {
        uint256 currentMaxSell = _gonBalances[sender].mul(maxSell).div(
            maxSellDenominator
        );
        maxSellInEpoch[sender][epoch] = currentMaxSell >
            maxSellInEpoch[sender][epoch]
            ? currentMaxSell
            : maxSellInEpoch[sender][epoch];
        require(
            sell[sender][epoch].add(gonAmount) <=
                maxSellInEpoch[sender][epoch]
        );
        sell[sender][epoch] = sell[sender][epoch].add(gonAmount); }
    .....
}
```

# FOUND THREATS

## ⚠ High Risk

- Owner can assign any address as lockAddress. Along with total supply increasing with each rebase, the lockAddress' balances are increased too if its holdings are above 500,000.

```
uint256 lockMaxBalance = 5 * 10**5 * 10**DECIMALS;
function setLockAddress(address _address) external onlyOwner {
    lockAddress = _address;
}
function rebase() internal {
    .....
    _totalSupply = _totalSupply.mul(((10**RATE_DECIMALS).add(rebaseRate)**times).div((10**RATE_DECIMALS)**times));
    gonsPerFragment = TOTAL_GONS.div(_totalSupply);
    pairContract.sync();
    _rebaseEpoch = epoch;
    if (lockAddress != address(0)) {
        if (balanceOf(lockAddress) > lockMaxBalance) {
            _gonBalances[lockAddress] = lockMaxBalance.mul(gonsPerFragment);
            _gonBalances[offChainGameReceiver] = _gonBalances[
                offChainGameReceiver
            ].add(
                _gonBalances[lockAddress] -
                lockMaxBalance.mul(gonsPerFragment)
            );
            _updateAccountSnapshot(lockAddress);
            _updateAccountSnapshot(offChainGameReceiver);
        }
    }
    emit Rebase(epoch, _totalSupply);
}
```

- Owner can blacklist only contract addresses. If liquidity pair is blacklisted, this will lead to inability for trade.

```
function setBotBlacklist(address _botAddress, bool _flag)
    external
    onlyOwner
{
    require(isContract(_botAddress), "only contract address");
    blacklist[_botAddress] = _flag;
}
```

# FOUND THREATS

## ⚠ Medium Risk

This is rebase token with dynamic supply up to MAX\_SUPPLY 1,200,000,000,000. Current supply is 1,500,000. This can lead to token price inflation in future.

Owner can turn on/off rebase.

```
function setAutoRebase(bool _flag) external onlyOwner {
    if (_flag) {
        _autoRebase = _flag;
    } else {
        _autoRebase = !_flag;
    }
}
```

Owner can set buy/sell fees up to 15% (combined buy+sell=30%).

```
function setFee(
    uint256 _treasuryFee,
    uint256 _insuranceFundFee,
    uint256 _memeFee
) external onlyOwner {
    require(_treasuryFee + _insuranceFundFee + _memeFee < 150);
    treasuryFee = _treasuryFee;
    insuranceFundFee = _insuranceFundFee;
    memeFee = _memeFee;
    totalFee = treasuryFee.add(insuranceFundFee).add(memeFee);
}
```

- Recommendation:
  - Good fees practice is combined buy+sell not to exceed 25%.

# FOUND THREATS

## ⚠ Medium Risk

Owner can change vote contract and withdraw funds from the token's contract.

If holder is represented in the vote contract, he will be unable to sell.

```
function setVoteContract(address _address)external onlyOwner
    returns (bool)
{
    require(isContract(_address));
    voteContract = IRemedaoVote(_address);
    if (address(this).balance != 0) {
        (bool success, ) = payable(address(voteContract)).call{
            value: address(this).balance,
            gas: 30000
        }("");
        return success;
    }
    return true;
}

function _transferFrom(
    address sender, address recipient, uint256 amount)
internal returns (bool) {
    .....
    if (address(voteContract) != address(0)) {
        require(!voteContract.lockVote(epoch, sender));
    }
    .....
}
```

RECOMMENDATIONS FOR

# GOOD PRACTICES

---

1

Consider fundamental tradeoffs

2

Be attentive to blockchain properties

3

Ensure careful rollouts

4

Keep contracts simple

5

Stay up to date and track development

## RemeDAO

### GOOD PRACTICES FOUND

- ✓ The owner cannot mint new tokens after deployment
- ✓ The owner cannot stop or pause the contract
- ✓ The smart contract utilizes "SafeMath" to prevent overflows

\* ⚠ There is no information about tokens distribution based on the project's whitepaper and/or website:

# TOKENOMICS

# THE TEAM

The team at **RemeDao** has privately doxxed to SPYWOLF by completing the following KYC requirements:

- ID Verification
- Video statement
- Video interview with devs
- Owner's wallet verification

# ABOUT US

We are a growing crypto security agency offering audits, KYCs and consulting services for some of the top names in the crypto industry.

- ✓ OVER 150 SUCCESSFUL CLIENTS
- ✓ MORE THAN 500 SCAMS EXPOSED
- ✓ MILLIONS SAVED IN POTENTIAL FRAUD
- ✓ PARTNERSHIPS WITH TOP LAUNCHPADS, INFLUENCERS AND CRYPTO PROJECTS
- ✓ CONSTANTLY BUILDING TOOLS TO HELP INVESTORS DO BETTER RESEARCH

# Disclaimer

This report shows findings based on our limited project analysis, following good industry practice from the date of this report, in relation to cybersecurity vulnerabilities and issues in the framework and algorithms based on smart contracts, overall social media and website presence and team transparency details of which are set out in this report. In order to get a full view of our analysis, it is crucial for you to read the full report.

While we have done our best in conducting our analysis and producing this report, it is important to note that you should not rely on this report and cannot claim against us on the basis of what it says or doesn't say, or how we produced it, and it is important for you to conduct your own independent investigations before making any decisions. We go into more detail on this in the disclaimer below – please make sure to read it in full.

## **DISCLAIMER:**

By reading this report or any part of it, you agree to the terms of this disclaimer. If you do not agree to the terms, then please immediately cease reading this report, and delete and destroy any and all copies of this report downloaded and/or printed by you. This report is provided for information purposes only and on a non-reliance basis, and does not constitute investment advice.

No one shall have any right to rely on the report or its contents, and SpyWolf and its affiliates (including holding companies, shareholders, subsidiaries, employees, directors, officers and other representatives) (SpyWolf) owe no duty of care towards you or any other person, nor does SpyWolf make any warranty or representation to any person on the accuracy or completeness of the report.

The report is provided "as is", without any conditions, warranties or other terms of any kind except as set out in this disclaimer, and SpyWolf hereby excludes all representations, warranties, conditions and other terms (including, without limitation, the warranties implied by law of satisfactory quality, fitness for purpose and the use of reasonable care and skill) which, but for this clause, might have effect in relation to the report. Except and only to the extent that it is prohibited by law, SpyWolf hereby excludes all liability and responsibility, and neither you nor any other person shall have any claim against SpyWolf, for any amount or kind of loss or damage that may result to you or any other person (including without limitation, any direct, indirect, special, punitive, consequential or pure economic loss or damages, or any loss of income, profits, goodwill, data, contracts, use of money, or business interruption, and whether in delict, tort (including without limitation negligence), contract, breach of statutory duty, misrepresentation (whether innocent or negligent) or otherwise under any claim of any nature whatsoever in any jurisdiction) in any way arising from or connected with this report and the use, inability to use or the results of use of this report, and any reliance on this report. The analysis of the security is purely based on the smart contracts, website, social media and team.

No applications were reviewed for security. No product code has been reviewed.
