

# SPYWOLF

## Security Audit Report

(TESTNET)

Completed on  
**February 03, 2023**

# OVERVIEW

This audit has been prepared for **North Apes** to review the main aspects of the project to help investors make an informative decision during their research process.

You will find a summarized review of the following key points:

- ✓ Contract's source code
- ✓ Owners' wallets
- ✓ Tokenomics
- ✓ Team transparency and goals
- ✓ Website's age, code, security and UX
- ✓ Whitepaper and roadmap
- ✓ Social media & online presence

“

*The results of this audit are purely based on the team's evaluation and does not guarantee nor reflect the projects outcome and goal*

- SPYWOLF Team -

”

# North Apes

## PROJECT DESCRIPTION

### **According to their whitepaper:**

North Apes is an interactive NFT collection of 5,555 unique apes and a deflationary token on the Ethereum blockchain. Both the NFT and the token come with well known but also new features and opportunities to take profits on an initial investment. Most importantly, however, does the project aim to incentivize activity along its community.

**Release Date:** Minting starts in February 3rd, 2023

**Category:** NFT

# CONTRACT INFO

Token Name  
North COin

Symbol  
NORTH

Contract Address  
0x67bf6e8eBC081e185fF60153dA917166EA1AfBAB

Network  
Binance Smart Chain  
**TESTNET**

Language  
Solidity

Deployment Date  
Feb 03, 2023

Verified?  
Yes

Total Supply  
1,000,000,000

Status  
Not launched

## TAXES

Buy Tax  
**Up to  
5%**

Sell Tax  
**Up to  
20%**

## Our Contract Review Process

The contract review process pays special attention to the following:

- ✓ Testing the smart contracts against both common and uncommon vulnerabilities
- ✓ Assessing the codebase to ensure compliance with current best practices and industry standards.
- ✓ Ensuring contract logic meets the specifications and intentions of the client.
- ✓ Cross referencing contract structure and implementation against similar smart contracts produced by industry leaders.
- ✓ Thorough line-by-line manual review of the entire codebase by industry experts.

### Blockchain security tools used:

- OpenZeppelin
- Mythril
- Solidity Compiler
- Hardhat

# CURRENT STATS

(As of February 03, 2023)

Liquidity

0.1 WBNB

Burn

No burnt tokens

Status:  
**Not Launched!**

MaxTxAmount  
No limit

DEX  
PancakeSwap

LP Address(es)

Liquidity not added yet

# TOKEN TRANSFERS STATS

Transfer Count	TESTNET
Uniq Senders	TESTNET
Uniq Receivers	TESTNET
Total Amount	TESTNET
Median Transfer Amount	TESTNET
Average Transfer Amount	TESTNET
First transfer date	TESTNET
Last transfer date	TESTNET
Days token transferred	TESTNET

# SMART CONTRACT STATS

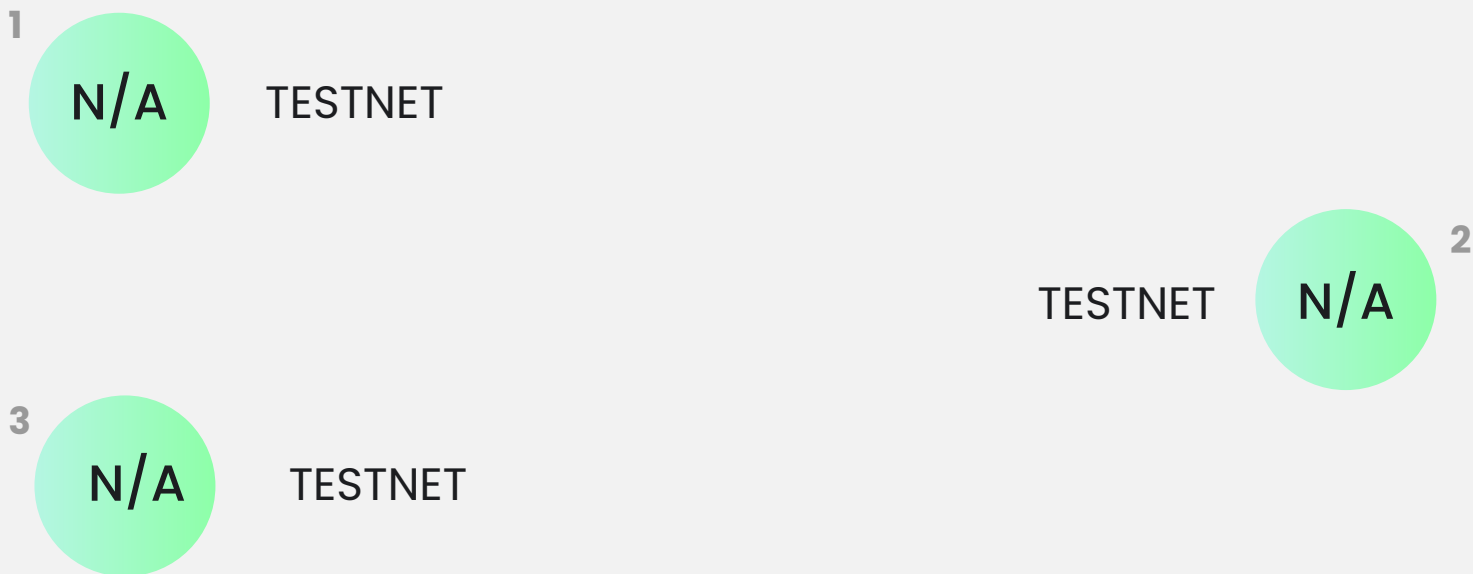

Calls Count	TESTNET
External calls	TESTNET
Internal calls	TESTNET
Transactions count	TESTNET
Uniq Callers	TESTNET
Days contract called	TESTNET
Last transaction time	TESTNET
Created	TESTNET
Create TX	TESTNET
Creator	TESTNET

# FEATURED WALLETS

Owner address	0x069c853983de5b78f103710d88681a7ca161f5d0
LP address	Liquidity not added yet

## TOP 3 UNLOCKED WALLETS

# VULNERABILITY CHECK

Design Logic	Passed
Compiler warnings.	Passed
Private user data leaks	Passed
Timestamp dependence	Passed
Integer overflow and underflow	Passed
Race conditions and reentrancy. Cross-function race conditions	Passed
Possible delays in data delivery	Passed
Oracle calls	Passed
Front running	Passed
DoS with Revert	Passed
DoS with block gas limit	Passed
Methods execution permissions	Passed
Economy model	Passed
Impact of the exchange rate on the logic	Passed
Malicious Event log	Passed
Scoping and declarations	Passed
Uninitialized storage pointers	Passed
Arithmetic accuracy	Passed
Cross-function race conditions	Passed
Safe Zeppelin module	Passed
Fallback function security	Passed

# THREAT LEVELS

When performing smart contract audits, our specialists look for known vulnerabilities as well as logical and access control issues within the code. The exploitation of these issues by malicious actors may cause serious financial damage to projects that failed to get an audit in time. We categorize these vulnerabilities by the following levels:

## High Risk

---

Issues on this level are critical to the smart contract's performance/functionality and should be fixed before moving to a live environment.

## Medium Risk

---

Issues on this level are critical to the smart contract's performance/functionality and should be fixed before moving to a live environment.

## Low Risk

---

Issues on this level are minor details and warning that can remain unfixed.

## Informational

---

Information level is to offer suggestions for improvement of efficacy or security for features with a risk free factor.

# FOUND THREATS

## ⚠ Medium Risk

Owner can withdraw LP tokens from the contract 2 days after initiating the unlockLP function.

```
uint256 private constant TIMELOCK = 2 days;

function unlockLP() external onlyOwner {
    _lpUnlockTimestamp = block.timestamp + TIMELOCK;
    emit UnlockLP(_lpUnlockTimestamp);
}

function withdrawLP() external onlyOwner {
    require(_lpUnlockTimestamp != 0 && block.timestamp >= _lpUnlockTimestamp,
        "NorthCoin::withdrawLP: LP is locked");
    IUniswapV2Pair pair = IUniswapV2Pair(_pair);
    uint256 lp = pair.balanceOf(address(this));

    if (lp != 0) {
        pair.transfer(_pair, lp);
        pair.burn(address(this));
    }

    IERC20 weth = IERC20(_weth);
    weth.safeTransfer(_treasury, weth.balanceOf(address(this)));
}
```

# FOUND THREATS

## Informational

Owner can set the NFT address once.

If non contract address is set as NFT or contract that do not have the correct `balanceOf()` function, trading will fail.

```
address private immutable _nft;
constructor(address treasury, address nft) ERC20("North Coin", "NORTH") {
    _treasury = treasury;
    _nft = nft;
    _router = INorthTreasury(treasury).router();
    IUniswapV2Router02 router = IUniswapV2Router02(_router);
    _weth = router.WETH();
    _pair = IUniswapV2Factory(router.factory()).createPair(address(this), _weth);
    _mint(treasury, 10 ** decimals() * MAX_SUPPLY);
    _updateHolders(treasury);
}

function _transfer(address sender, address recipient, uint256 amount) internal override {
    .....
    uint256 balance = IERC721(_nft).balanceOf(recipient);
    if (balance == 0) {
        fee = amount / 20; // 5%
    } else if (balance == 1) {
        fee = amount / 25; // 4%
    } else if (balance == 2) {
        fee = amount * 3 / 100; // 3%
    } else if (balance == 3) {
        fee = amount / 50; // 2%
    } else if (balance == 4) {
        fee = amount / 100; // 1%
    }
    .....
}
```

# FOUND THREATS

## Informational

This token uses dynamic sell fees up to 20%.

Buy fees are from 5% to 1% considering the amount of NFTs that user hold (from 0 to 4 NFTS). If user holds above 4 nfts buy fees become 0%.

Combined buy+sell=25%.

```
function _transfer(address sender, address recipient, uint256 amount) internal override {
    .....
    uint256 fee;
    buying = true;
    uint256 balance = IERC721(_nft).balanceOf(recipient);

    if (balance == 0) {
        fee = amount / 20; // 5%
    } else if (balance == 1) {
        fee = amount / 25; // 4%
    } else if (balance == 2) {
        fee = amount * 3 / 100; // 3%
    } else if (balance == 3) {
        fee = amount / 50; // 2%
    } else if (balance == 4) {
        fee = amount / 100; // 1%
    }
}
} else if (recipient == _pair) { // selling
    uint256 newVariableSellFee = Math.min(variableSellFee + FEE_DENOMINATOR * amount / liquidity, FEE_DENOMINATOR / 5);
    // increase variable sell fee based on amount vs liquidity to max. 20%

    if (newVariableSellFee != variableSellFee) {
        emit UpdateVariableSellFee(variableSellFee, newVariableSellFee);
        variableSellFee = newVariableSellFee;
    }

    fee = amount * variableSellFee / FEE_DENOMINATOR;
}
    .....
}
```

## Informational

This contract uses intermediary 'treasury' contract that sets the token's router and receives the total minted token supply and NFT contract that is used in dynamic buy taxes.

The intermediary contract and the NFT contract are not in the scope of the current audit.

```
address public immutable _treasury;
address public immutable _nft;
address public immutable _router;
address public immutable _weth;
address public immutable _pair;

constructor(address treasury, address nft) ERC20("North Coin", "NORTH") {
    _treasury = treasury;
    _nft = nft;
    _router = 0xBBe737384C2A26B15E23a181BDfBd9Ec49E00248;
    IUniswapV2Router02 router = IUniswapV2Router02(_router);
    _weth = router.WETH();
    _pair = IUniswapV2Factory(router.factory()).createPair(address(this), _weth);
    _mint(treasury, 10 ** decimals() * MAX_SUPPLY);
    _updateHolders(treasury);
}
```

RECOMMENDATIONS FOR

# GOOD PRACTICES

---

1

Consider fundamental tradeoffs

2

Be attentive to blockchain properties

3

Ensure careful rollouts

4

Keep contracts simple

5

Stay up to date and track development

## North Apes

### GOOD PRACTICES FOUND

- ✓ The owner cannot mint new tokens after deployment
- ✓ The owner cannot set a transaction limit
- ✓ The smart contract utilizes "Math" to prevent overflows

# SPYWOLF

# ABOUT US

We are a growing crypto security agency offering audits, KYCs and consulting services for some of the top names in the crypto industry.

- ✓ OVER 150 SUCCESSFUL CLIENTS
- ✓ MORE THAN 500 SCAMS EXPOSED
- ✓ MILLIONS SAVED IN POTENTIAL FRAUD
- ✓ PARTNERSHIPS WITH TOP LAUNCHPADS, INFLUENCERS AND CRYPTO PROJECTS
- ✓ CONSTANTLY BUILDING TOOLS TO HELP INVESTORS DO BETTER RESEARCH

# Disclaimer

This report shows findings based on our limited project analysis, following good industry practice from the date of this report, in relation to cybersecurity vulnerabilities and issues in the framework and algorithms based on smart contracts, overall social media and website presence and team transparency details of which are set out in this report. In order to get a full view of our analysis, it is crucial for you to read the full report.

While we have done our best in conducting our analysis and producing this report, it is important to note that you should not rely on this report and cannot claim against us on the basis of what it says or doesn't say, or how we produced it, and it is important for you to conduct your own independent investigations before making any decisions. We go into more detail on this in the disclaimer below – please make sure to read it in full.

## **DISCLAIMER:**

By reading this report or any part of it, you agree to the terms of this disclaimer. If you do not agree to the terms, then please immediately cease reading this report, and delete and destroy any and all copies of this report downloaded and/or printed by you. This report is provided for information purposes only and on a non-reliance basis, and does not constitute investment advice.

No one shall have any right to rely on the report or its contents, and SpyWolf and its affiliates (including holding companies, shareholders, subsidiaries, employees, directors, officers and other representatives) (SpyWolf) owe no duty of care towards you or any other person, nor does SpyWolf make any warranty or representation to any person on the accuracy or completeness of the report.

The report is provided "as is", without any conditions, warranties or other terms of any kind except as set out in this disclaimer, and SpyWolf hereby excludes all representations, warranties, conditions and other terms (including, without limitation, the warranties implied by law of satisfactory quality, fitness for purpose and the use of reasonable care and skill) which, but for this clause, might have effect in relation to the report. Except and only to the extent that it is prohibited by law, SpyWolf hereby excludes all liability and responsibility, and neither you nor any other person shall have any claim against SpyWolf, for any amount or kind of loss or damage that may result to you or any other person (including without limitation, any direct, indirect, special, punitive, consequential or pure economic loss or damages, or any loss of income, profits, goodwill, data, contracts, use of money, or business interruption, and whether in delict, tort (including without limitation negligence), contract, breach of statutory duty, misrepresentation (whether innocent or negligent) or otherwise under any claim of any nature whatsoever in any jurisdiction) in any way arising from or connected with this report and the use, inability to use or the results of use of this report, and any reliance on this report. The analysis of the security is purely based on the smart contracts, website, social media and team.

No applications were reviewed for security. No product code has been reviewed.
