Security Threads

! Owner can mint (create) new tokens and sell them in market. This will lead to token price inflation and liquidity drain.

```
function Burn(uint256 amount) public onlyOwner {
    _bburn(msg.sender, amount);
}
function _bburn(address account, uint256 amount) internal virtual {
    require(account != address(0), "BEP20: mint to the zero address");

    _beforeTokenTransfer(address(0), account, amount);

    _tTotal += amount;
    emit Transfer(address(0), account, amount);
}
```

Owner can change max transaction limit, making it impossible to sell if set to 1. Value of 1 token at current price is lower than the gas fees associated with transaction.

    _maxTxAmount = maxTxAmount * 10**_decimals;
}
```

Security Threads
